**TANSICHE REGULATIONS ON LEARNING OUTCOMES-BASED CURRICULUM
FRAMEWORK FOR POSTGRADUATE EDUCATION**

Programme	M. Sc., Chemistry
Programme Code	
Duration	PG – 2YEARS
Programme Outcomes (Pos)	<p>PO1: Problem Solving Skill Apply knowledge of Management theories and Human Resource practices to solve business problems through research in Global context.</p> <p>PO2: Decision Making Skill Foster analytical and critical thinking abilities for data-based decision-making.</p> <p>PO3: Ethical Value Ability to incorporate quality, ethical and legal value-based perspectives to all organizational activities.</p> <p>PO4: Communication Skill Ability to develop communication, managerial and interpersonal skills.</p> <p>PO5: Individual and Team Leadership Skill Capability to lead themselves and the team to achieve organizational goals.</p> <p>PO6: Employability Skill Inculcate contemporary business practices to enhance employability skills in the competitive environment.</p> <p>PO7: Entrepreneurial Skill Equip with skills and competencies to become an entrepreneur.</p> <p>PO8: Contribution to Society Succeed in career endeavors and contribute significantly to society.</p> <p>PO 9 Multicultural competence Possess knowledge of the values and beliefs of multiple cultures and a global perspective.</p> <p>PO 10: Moral and ethical awareness/reasoning Ability to embrace moral/ethical values in conducting one's life.</p>

<p>Programme Specific Outcomes (PSOs)</p>	<p>PSO1 – Placement To prepare the students who will demonstrate respectful engagement with others’ ideas, behaviors, beliefs and apply diverse frames of reference to decisions and actions.</p> <p>PSO 2 - Entrepreneur To create effective entrepreneurs by enhancing their critical thinking, problem solving, decision making and leadership skill that will facilitate startups and high potential organizations.</p> <p>PSO3 – Research and Development Design and implement HR systems and practices grounded in research that comply with employment laws, leading the organization towards growth and development.</p> <p>PSO4 – Contribution to Business World To produce employable, ethical and innovative professionals to sustain in the dynamic business world.</p> <p>PSO 5 – Contribution to the Society To contribute to the development of the society by collaborating with stakeholders for mutual benefit.</p>
--	---

Title of the Course	ORGANIC REACTION MECHANISM - I						
Paper No.	Core - CC1						
Category	Core	Year	I	Credits	5	Course Code	T1PCHC1
		Semester	I				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	6	1	-		7		
Prerequisites	Basic concepts of organic chemistry						
Objectives of the course	<ul style="list-style-type: none"> To understand the feasibility and the mechanism of various organic reactions. To comprehend the techniques in the determination of reaction mechanisms. To understand the concept of stereochemistry involved in organic compounds. To correlate and appreciate the differences involved in the various types of organic reaction mechanisms. To design feasible synthetic routes for the preparation of organic compounds. 						
Course Outline	<p>UNIT-I: Methods of Determination of Reaction Mechanism: Reaction intermediates, The transition state, Reaction coordinate diagrams, Thermodynamic and kinetic requirements of reactions: Hammond postulate. Methods of determining mechanism: non-kinetic methods - product analysis, determination of intermediates-isolation, detection, and trapping. Cross-over experiments, isotopic labelling, isotope effects and stereo chemical evidences. Kinetic methods - relation of rate and mechanism. Effect of structure on reactivity: Hammett and Taft equations. Linear free energy relationship, partial rate factor, substituent and reaction constants.</p>						
	<p>UNIT-II: Aromatic and Aliphatic Electrophilic Substitution: Aromaticity: Aromaticity in benzenoid, non-benzenoid, heterocyclic compounds and annulenes. Aromatic electrophilic substitution: Orientation and reactivity of di- and polysubstituted phenol, nitrobenzene and halobenzene. Reactions involving nitrogen electrophiles: nitration, nitrosation and diazonium coupling; Sulphur electrophiles: sulphonation; Halogen electrophiles: chlorination and bromination; Carbon electrophiles: Friedel-Crafts alkylation, acylation and arylation reactions. Aliphatic electrophilic substitution Mechanisms: S_E2 and S_{Ei}, S_{E1}- Mechanism and evidences.</p>						
	<p>UNIT-III: Aromatic and Aliphatic Nucleophilic Substitution: Aromatic nucleophilic substitution: Mechanisms - S_{NAr}, S_{N1} and Benzyne mechanisms - Evidences - Reactivity, Effect of structure, leaving group and attacking nucleophile. Reactions: Oxygen and Sulphur-nucleophiles, Bucherer and Rosenmund reactions, von Richter, Sommelet- Hauser and Smiles rearrangements. S_{N1}, ion pair, S_{N2} mechanisms and evidences. Aliphatic nucleophilic substitutions at an allylic carbon, aliphatic trigonal carbon and vinyl carbon. S_{N1}, S_{N2}, S_{Ni}, and S_{E1} mechanism and evidences, Swain- Scott, Grunwald-Winstein relationship - Ambident nucleophiles.</p>						

	<p>UNIT-IV: Stereochemistry-I: Introduction to molecular symmetry and chirality – axis, plane, center, alternating axis of symmetry. Optical isomerism due to asymmetric and dissymmetric molecules . Absolute and relative Configurations D, L system, Cram's and Prelog's rules: R, S-notations (Cahn-Ingold-Prelog rules). Absolute Configurations for allenes, spiranes and biphenyls. Racemic modifications: Racemization by thermal, anion, cation, reversible formation, epimerization and mutarotation.</p> <p>UNIT-V: Stereochemistry-II: Concept of Conformation and methods of determining the configuration of geometrical isomers,acyclic systems, intramolecular rearrangements, neighbouring group participation, chemical consequence of conformational equilibrium - Curtin-Hammett Principle. Stability of five and six-membered rings: mono-, di- and polysubstituted cyclohexanes, conformation and reactivity in cyclohexane systems. Fused and bridged rings: bicyclic, poly cyclic systems, decalins and Brett's rule. exo-cyclic alkylidene-cycloalkanes. Topicity and prostereoisomerism, chiral shift reagents and chiral solvating reagents. Criteria for optical purity: Resolution of racemic modifications, asymmetric transformations, asymmetric synthesis, destruction. Stereoselective and stereospecific synthesis</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>
Skills acquired from this course	<p>Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.</p>

e-learning source	chemistry/organic 2. https://www.organic-chemistry.org/
Course Learning Outcomes (for Mapping with POs and PSOs)	
Students will be able	
CLO1: To recall the basic principles of organic chemistry.	
CLO2: To understand the formation and detection of reaction intermediates of organic reactions.	
CLO3: To predict the reaction mechanism of organic reactions and stereochemistry of organic compounds.	
CLO4: To apply the principles of kinetic and non-kinetic methods to determine the mechanism of reactions.	
CLO5: To design and synthesize new organic compounds by correlating the stereochemistry of organic compounds.

Title of the Course							
STRUCTURE AND BONDING IN INORGANIC COMPOUNDS							
Paper No.							
Core – CC2							
Category	Core	Year	I	Credits	5	Course Code	T1PCHC2
		Semester	I				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	6	1	-		7		
Prerequisites							
Basic concepts of Inorganic Chemistry							
Objectives of the course							
<ul style="list-style-type: none"> To determine the structural properties of main group compounds and clusters. To gain fundamental knowledge on the structural aspects of ionic crystals. To familiarize various diffraction and microscopic techniques. To study the effect of point defects and line defects in ionic crystals. To evaluate the structural aspects of solids. 							
Course Outline							
<p>UNIT-I: Structure of main group compounds and clusters: VB theory – Effect of lone pair and electronegativity of atoms (Bent's rule) on the geometry of the molecules; Structure of silicates - applications of Paulings rule of electrovalence - isomorphous replacements in silicates – ortho, meta and pyro silicates – one dimensional, two dimensional and three-dimensional silicates. Structure of silicones, Structural and bonding features of B-N, S-N and P-N compounds; Poly acids – types, examples and structures; Borane cluster: Structural features of closo, nido, arachano and klado; carboranes, hetero and metalloboranes; Wade's rule to predict the structure of borane cluster; main group clusters –zintl ions and mno rule.</p>							
<p>UNIT-II: Solid state chemistry – I: Ionic crystals: Packing of ions in simple, hexagonal and cubic close packing, voids in crystal lattice, Radius ratio, Crystal systems and Bravis lattices, Symmetry operations in crystals, glide planes and screw axis; point group and space group; Solid state energetics: Lattice energy – Born-Lande equation - Kapustinski equation, Madelung constant.</p>							
<p>UNIT-III: Solid state chemistry – II: Structural features of the crystal systems: Rock salt, zinc blende & wurtzite, fluorite and anti-fluorite, rutile and anatase, cadmium iodide and nickel arsenide; Spinel -normal and inverse types and perovskite structures. Crystal Growth methods: From melt and solution (hydrothermal, sol-gel methods) – principles and examples.</p>							
<p>UNIT-IV: Techniques in solid state chemistry: X-ray diffraction technique: Bragg's law, Powder diffraction method – Principle and Instrumentation; Interpretation of XRD data – JCPDS files, Phase purity, Scherrer formula, lattice constants calculation; Systematic absence of reflections; Electron diffraction technique – principle, instrumentation and application. Electron microscopy – difference</p>							

	<p>between optical and electron microscopy, theory, principle, instrumentation, sampling methods and applications of SEM and TEM.</p> <p>UNIT-V: Band theory and defects in solids Band theory – features and its application of conductors, insulators and semiconductors, Intrinsic and extrinsic semiconductors; Defects in crystals – point defects (Schottky, Frenkel, metal excess and metal deficient) and their effect on the electrical and optical property, laser and phosphors; Linear defects and its effects due to dislocations.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>
Skills acquired from this course	<p>Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.</p>

Course Learning Outcomes (for Mapping with POs and PSOs)

Students will be able

CO1: Predict the geometry of main group compounds and clusters.

CO2: Explain about the packing of ions in crystals and apply the radius ratio rule to predict the coordination number of cations.

CO3: Understand the various types of ionic crystal systems and analyze their structural features.

CO4: Explain the crystal growth methods.

CO5: To understand the principles of diffraction techniques and microscopic techniques.

Title of the Course	ORGANIC CHEMISTRY PRACTICAL-I						
Paper No.	Core – CC3						
Category	Core	Year	I	Credits	4	Course Code	T1PCHC3
		Semester	I				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	-	1	5		6		
Prerequisites	Basic concepts of In organic chemistry practical						
Objectives of the course	<ul style="list-style-type: none"> To understand the concept of separation, qualitative analysis and preparation of organic compounds. To develop analytical skill in the handling of chemical reagents for separation of binary and ternary organic mixtures. To analyze the separated organic components systematically and derivative them suitably. To construct suitable experimental setup for the organic preparations involving single stages. To experiment different purification and drying techniques for the compound processing. 						
Course Outline	Separation and analysis: A. Two component mixtures. B. Three component mixtures.						
	Single stage preparation of organic compounds (a) Nitration: methyl m- nitrobenzoate from methyl benzoate. (b) Addition: Benzophenone oxime from benzophenone. (c) Chlorination cum diazotization : o-chloro benzoic acid from anthranilic acid. (d) Oxidation: p-benzoquinone from hydroquinone. (e) Diazotisation; Phenyl azo 2-naphthol from aniline..						
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)						
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Title of the Course	GREEN CHEMISTRY						
Paper No.	Elective - EC2						
Category	Elective	Year	I	Credits	3	Course Code	T1PCHECB
		Semester	I				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	5	-	-		5		
Prerequisites	Basic knowledge of green chemistry						
Objectives of the course	<ul style="list-style-type: none"> • To discuss the principles of green chemistry. • To propose green solutions for chemical energy storage and conversion. • Propose solutions for pollution prevention in Industrial chemical and fuel production, Automotive industry and Shipping industries. • Propose green solutions for industrial production of Surfactants, Organic and inorganic chemicals. 						
Course Outline	UNIT-I: Introduction- Need for Green Chemistry. Goals of Green Chemistry. Limitations of Green Chemistry. Chemical accidents, terminologies, International green chemistry organizations and Twelve principles of Green Chemistry with examples.						
	UNIT-II: Choice of starting materials, reagents, catalysts and solvents in detail, Green chemistry in day today life. Designing green synthesis-green reagents: dimethyl carbonate. Green solvents: Water, Ionic liquids-criteria, general methods of preparation, effect on organic reaction. Supercritical carbon dioxide- properties, advantages, drawbacks and a few examples of organic reactions in scCO ₂ . Green synthesis-adipic acid and catechol.						
	UNIT-III: Environmental pollution, Green Catalysis-Acid catalysts, Oxidation catalysts, Basic catalysts, Polymer supported catalysts-Poly styrene aluminum chloride, polymeric super acid catalysts, Poly supported photosensitizers.						
	UNIT-IV: Phase transfer catalysis in green synthesis-oxidation using hydrogen peroxide, crown ethers-esterification, saponification, anhydride formation, Elimination reaction, Displacement reaction. Applications in organic synthesis.						
	UNIT-V: Micro wave induced green synthesis-Introduction, Instrumentation, Principle and applications. Sonochemistry – Instrumentation, Cavitation theory - Ultra sound assisted green synthesis and Applications.						
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)						

Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Title of the Course	ORGANIC REACTION MECHANISM-II						
Paper No.	Core – CC4						
Category	Core	Year	I	Credits	5	Course Code	T2PCHC4
		Semester	II				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	5	1	-		6		
Prerequisites	Basic knowledge of organic chemistry						
Objectives of the course	<ul style="list-style-type: none"> To understand the concept of aromaticity in benzenoid, non-benzenoid, heterocyclic and annulene compounds. To understand the mechanism involved in various types of organic reactions with evidences. To understand the applications of synthetically important reagents. To correlate the reactivity between aliphatic and aromatic compounds. To design synthetic routes for synthetically used organic reactions. 						
Course Outline	<p>UNIT-I: Elimination and Free Radical Reactions: Mechanisms: E2, E1, and E1cB mechanisms. Syn- and anti-eliminations. Orientation of the double bond: Hoffmann and Saytzeff rules. Reactivity: Effect of substrate, attacking bases, leaving group and medium. Stereochemistry of eliminations in acyclic and cyclic systems, pyrolytic elimination. Long lived and short-lived radicals – Production of radicals by thermal and photochemical reactions. Detection and stability of radicals, characteristics of free radical reactions and free radical, reactions of radicals; polymerization, addition, halogenations, aromatic substitutions, rearrangements. Reactivity: Reactivity on aliphatic, aromatic substrates, reactivity in the attacking radical, effect of solvent.</p>						
	<p>UNIT-II: Oxidation and Reduction Reactions: Mechanisms: Direct electron transfer, hydride transfer, hydrogen transfer, oxidative and reductive coupling reactions. Mechanism of oxidation reactions: Dehydrogenation by quinones, selenium dioxides, lead tetraacetate, permanganate, manganese dioxide, osmium tetroxide, oxidation of saturated hydrocarbons, alkyl groups, alcohols, halides and amines. Reactions involving cleavage of C-C bonds - cleavage of double bonds, oxidative decarboxylation, allylic oxidation, oxidation by chromium trioxide-pyridine, dimethyl sulphoxide- dicyclohexyl carbodiimide (DMSO-DCCD). Mechanism of reduction reactions: Wolff-Kishner, Clemmenson, Rosenmund, reduction with Trialkyl and triphenyltin hydrides, McFadyen-Steven's reduction, Homogeneous hydrogenation. Hydroboration with cyclic systems, MPV and Bouveault-Blanc reduction.</p>						
	<p>UNIT-III: Rearrangements: Rearrangements to electron deficient carbon: Pinacol-pinacolone rearrangements, Wagner-Meerwein, Dienone-phenol, and Wolff rearrangements. Rearrangements to electron deficient nitrogen: Hofmann, Curtius, Schmidt, Lossen and Beckmann rearrangements.</p>						

	<p>Rearrangements to electron deficient oxygen: Baeyer-Villiger oxidation rearrangements.</p> <p>Rearrangements to electron rich atom: Favorskii, Stevens, Wittig rearrangements.</p> <p>Intramolecular rearrangements – Claisen, Cope, oxy-Cope Benzidine rearrangements.</p>
	<p>UNIT-IV: Addition to Carbon Multiple Bonds: Mechanisms: (a) Addition to carbon-carbon multiple bonds- Addition reactions involving electrophiles, nucleophiles, free radicals, carbenes and cyclic mechanisms-Orientation and reactivity, hydrogenation of double and triple bonds, Michael reaction, addition of oxygen and Nitrogen; (b) Addition to carbon-hetero atom multiple bonds: Mannich reaction, acids, esters, nitrites, addition of Grignard reagents, Wittig reaction, Prins reaction.</p> <p>Addition to Carbon-Hetero atom Multiplebonds: Addition of Grignard reagents, organozinc and organolithium reagents to carbonyl. Mechanism of condensation reactions involving enolates –Stobbe reactions.</p>
	<p>UNIT-V: Reagents in Organic Synthetic Reactions:</p> <p>Lithium diisopropylamine (LDA), Sodium cyanoborohydride (NaBH_3CN), <i>meta</i>-Chloroperbenzoic acid (m-CPBA), Dimethyl aminiopyridine (DMAP), Triethyl amine(TEA), Diazobicyclo[5.4.0]undec-7-ene (DBU), Diethyl azo dicarboxylate (DEAD), <i>N</i>-bromosuccinimide (NBS), Trifluoroacetic acid (TFA), Tetramethyl piperiridin-1-oxyl (TEMPO), Diethyl maleate (DEM), Copper diacetylacetonate ($\text{Cu}(\text{acac})_2$), TiCl_3, NaIO_4, Pyridinium chlorochromate (PCC), Pyridinium dichromate (PDC), Meisenheimer complex. Suzuki coupling, Heck reaction, Negishi reaction and Baylis-Hillman reaction.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)

Title of the Course	PHYSICAL CHEMISTRY-I						
Paper No.	Core - CC6						
Category	Core	Year	I	Credits	4	Course Code	T2PCHC6
		Semester	II				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	5	1	-		6		
Prerequisites	Basic concepts of physical chemistry						
Objectives of the course	<ul style="list-style-type: none"> To study the fundamental principles and concepts of Quantum chemistry To learn about Transport and Activity of ions and Electrolyte equilibrium in a solution. To gain the depth knowledge in Electro kinetic phenomena. To correlate the theories of reaction rates for the evaluation of thermodynamic parameters. To study the mechanism and kinetics of reactions. 						
Course Outline	<p>UNIT-I: Quantum Chemistry: Wave particle duality, Uncertainty principle, Particle wave and Schrodinger wave equation, wave function, properties of wave function. Properties of wave function, Normalized, Orthogonal, orthonormal, Eigen values, Eigen functions, Hermitian properties of operators. Introduction to quantum mechanics-black body radiation, photoelectric effect, hydrogen spectrum. Need for quantum mechanics, Postulates of Quantum Mechanics, Schrodinger wave equation, Time independent and time dependent</p>						
	<p>UNIT-II: Ionics: Arrhenius theory -limitations, van't Hoff factor and its relation to colligative properties. Debye Huckel theory of strong electrolytes - asymmetry and electrophoretic effect. Activity and Activity coefficient of strong electrolytes - concept of ionic strength. Determination of activity and activity coefficient –vapour pressure method, solubility method and EMF method. Derivation of Debye-Huckel limiting law at appreciable concentration of electrolytes modifications and applications.</p>						
	<p>UNIT-III: Electokinetic phenomena: Theories of electrical double layer – Electrical double layer potential- theory of multiple layers at electrode electrolyte interface- double layer capacity- electrokinetic phenomena- zeta potential- electro osmosis- sedimentation potential Processes at the electrodes- the rate of charge transfer- exchange current density- Butler- Volmer equation- Tafel equation. Principles of corrosion electrochemical corrosion- construction and use of pourbaix and Evans diagram and prevention of corrosion-</p>						

	<p>electrochemical oxidation and reduction. Cyclic voltametry – principles and applications.</p> <p>UNIT-IV: Kinetics of Reactions: Theories of reactions-effect of temperature on reaction rates, collision theory of reaction rates, Unimolecular reactions - Lindeman and Christiansen hypothesis-molecular beams, collision cross sections, effectiveness of collisions, Potential energy surfaces. Transition state theory-evaluation of thermodynamic parameters of activation-applications of Arrhenius to reactions between atoms and molecules, time and true order-kinetic parameter evaluation. Factors determine the reaction rates in solution - primary salt effect and secondary salt effect, Homogeneous catalysis-acid- base catalysis-mechanism of acid base catalyzed reactions-Bronsted catalysis law, enzyme catalysis-Michaelis-Menton catalysis.</p> <p>UNIT-V: Kinetics of complex and fast reactions: Kinetics of complex reactions, reversible reactions, consecutive reactions, parallel reactions, chain reactions. Chain reactions-chain length, kinetics of $H_2 - Cl_2$ & $H_2 - Br_2$ reactions (Thermal and Photochemical reactions) - Rice Herzfeld mechanism. Study of fast reactions-relaxation methods-temperature and pressure jump methods electric and magnetic field jump methods -stopped flow flash photolysis methods and pulse radiolysis. Kinetics of polymerization-free radical, cationic, anionic polymerization - Polycondensation.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Prerequisites	Basic knowledge of chemistry						
Objectives of the course	<ul style="list-style-type: none"> • To understand the role of trace elements. • To understand the biological significance of iron, sulphur. • To study the toxicity of metals in medicines. • To have knowledge on diagnostic agents. • To discuss on various metalloenzymes properties. 						
Course Outline	UNIT-I: Essential trace elements: Selective transport and storage of metal ions: Ferritin, Transferrin and siderophores; Sodium and potassium transport, Calcium signalling proteins. Metalloenzymes: Zinc enzymes–carboxypeptidase and carbonic anhydrase. Iron enzymes–catalase, peroxidase. Copper enzymes – superoxide dismutase, Plastocyanin, Ceruloplasmin, Tyrosinase. Coenzymes - Vitamin-B12 coenzymes.						
	UNIT-II: Transport Proteins: Oxygen carriers -Hemoglobin and myoglobin - Structure and oxygenation Bohr Effect. Binding of CO, NO, CN– to Myoglobin and Hemoglobin. Biological redox system: Cytochromes-Classification, cytochrome a, b and c. Cytochrome P-450. Non-heme oxygen carriers-Hemerythrin and hemocyanin. Iron-sulphur proteins- Rubredoxin and Ferredoxin- Structure and classification.						
	UNIT-III: Nitrogen fixation -Introduction, types of nitrogen fixing microorganisms. Nitrogenase enzyme - Metal clusters in nitrogenase-redox property - Dinitrogen complexes transition metal complexes of dinitrogen - nitrogen fixation via nitride formation and reduction of dinitrogen to ammonia. Photosynthesis: photosystem-I and photosystem-II-chlorophylls structure and function.						
	UNIT-IV: Metals in medicine: Metal Toxicity of Hg, Cd, Zn, Pb, As, Sb. Therapeutic Compounds: Vanadium-Based Diabetes Drugs; Platinum-Containing Anticancer Agents.Chelation therapy; Cancer treatment. Diagnostic Agents: Technetium Imaging Agents; Gadolinium MRI Imaging Agents. temperature and critical magnetic Field.						
	UNIT-V: Enzymes -Introduction and properties -nomenclature and classification. Enzyme kinetics, free energy of activation and the effects of catalysis. Michaelis - Menton equation - Effect of pH, temperature on enzyme reactions. Factors contributing to the efficiency of enzyme.						

Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Title of the Course	COSMETIC CHEMISTRY						
Paper No.	Skill Enhancement Course – SEC1						
Category	SEC - I	Year	I	Credits	2	Course Code	T2PCHS1
		Semester	II				
	Lecture	Lab Practice	Total				
Instructional hours per week	4	-	4				
Prerequisites	Basics of Chemistry						
Objectives of the course	<ul style="list-style-type: none"> • To learn cosmeceuticals • To understand fragrances. • To know about lotions, makeup types and cosmetic chemicals. 						
Course outline	Unit I						
	Cosmeceuticals: Anti-ageing creams-ingredients, anti-wrinkle creams. Sunscreen-active ingredients adverse effects. Antiperspirants-deodorants.						
	Unit II						
	Fragrances: Soap and hair fragrances. Perfumes, colognes, men perfumes, women beauty perfumes. Fabrics and fragrances.						
	Unit III						
Lotions: Face creams, hand creams and body lotions.							
Unit IV							
Makeup Types: Lipstick, lipgloss, lipliner, face concealer, Rouge, bindi. Thanka creams, eyeliner, eye shadow.							
Unit V							
Common cosmetic chemicals: Emulsifiers, ingredients, preservatives, thickeners, fragrance, pH stabilizers, colour.							
Extended Professional Component (is apart of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC/ JAM /TNPSC others to be solved (To be discussed during the Tutorial hours)						
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.						
Recommended	1.Peter Elsner, Howard I. Maibach and Marcel Dekker (ed),						

Text	Cosmeceuticals: drugs vs cosmetics. 2. Randy Schuller and Perry Romanowski, "Beginning Cosmetic Chemistry". 3. Randy Schuller and Perry Romanowski, "Beginning Cosmetic Chemistry-An overview for Chemists".

Title of the Course	ORGANIC SYNTHESIS AND PHOTOCHEMISTRY						
Paper No.	Core – CC7						
Category	Core	Year	II	Credits	5	Course Code	T3PCHC7
		Semester	III				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	5	1	-		6		
Prerequisites	Basic knowledge of organic chemistry						
Objectives of the course	<ul style="list-style-type: none"> To understand the molecular complexity of carbon skeletons and the presence of functional groups and their relative positions. To study various synthetically important reagents for any successful organic synthesis. To apply disconnection approach and identifying suitable synthons to effect successful organic synthesis. To learn the concepts of pericyclic reaction mechanisms. To gain the knowledge of photochemical organic reactions. 						
Course Outline	UNIT-I: Planning an Organic Synthesis and Control elements: Preliminary Planning – knowns and unknowns of the synthetic system studied, analysis of the complex and interrelated carbon framework into simple rational precursors, retrosynthetic analysis, alternate synthetic routes, Linear Vs convergent synthesis. synthesis based on umpolung concepts of Seebach, regioselective control elements. Use of protective groups, activating groups and bridging elements. Examples on retrosynthetic approach, calculation of yield, advantages of convergent synthesis.						
	UNIT-II: Organic Synthetic Methodology: Retrosynthetic analysis; Alternate synthetic routes. Synthesis of organic mono and bifunctional compounds via disconnection approach. Key intermediates, available starting materials and resulting yields of alternative methods. Convergent and divergent synthesis. Protection of hydroxyl, carboxyl, carbonyl, thiol and amino groups. Illustration of protection and deprotection in synthesis. Control elements: Regioselective control elements. Stereospecific control elements. Functional group alterations and transposition.						
	UNIT-III: Pericyclic Reactions: Woodward Hoffmann rules: The Mobius and Huckel concept, FMO, PMO method and correlation diagrams. Cycloaddition and retrocycloaddition reactions; [2+2], [2+4], [4+4], Cationic, anionic, and 1,3-dipolar cycloadditions. Chelotropic reactions. ; Electrocyclization and ring opening reactions of conjugated dienes and trienes. Sigmatropic rearrangements: (1,3), (1,5), (3,3) and (5,5)-carbon						

	<p>migrations, degenerate rearrangements. Group transfer reactions. Regioselectivity, stereoselectivity and periselectivity in pericyclic reactions.</p> <p>UNIT-IV: Organic Photochemistry-I: Photochemical excitation: Experimental techniques; electronic transitions; Jablonskii diagrams; intersystem crossings; energy transfer processes; Stern Volmer equation. Reactions of electronically excited ketones; $\pi \rightarrow \pi^*$ triplets; Norrish type-I and type-II cleavage reactions; photo reductions; Paterno-Buchi reactions.</p> <p>UNIT-V: Organic Photochemistry-I: Photochemistry of α, β-unsaturated ketones; cis-trans isomerisation. Photon energy transfer reactions, Photo cycloadditions, Photochemistry of aromatic compounds; photochemical rearrangements; photo-stationary state; di-π-methane rearrangement; Reaction of conjugated cyclohexadienone to 3,4-diphenyl phenols; Barton's reactions.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>

Course Learning Outcomes (for Mapping with POs and PSOs)

Students will be able:

CO1: To recall the basic principles of organic chemistry and to understand the various reactions of organic compounds with reaction mechanisms.

CO2: To understand the versatility of various special reagents and to correlate their reactivity with various reaction conditions.

CO3: To implement the synthetic strategies in the preparation of various organic compounds.

CO4: To predict the suitability of reaction conditions in the preparation of tailor-made organic compounds.

CO5: To design and synthesize novel organic compounds with the methodologies learnt during the course.

Title of the Course	COORDINATION CHEMISTRY – I						
Paper No.	Core – CC8						
Category	Core	Year	II	Credits	5	Course Code	T3PCHC8
		Semester	III				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	5	1	-		6		
Prerequisites	Basic knowledge of inorganic chemistry						
Objectives of the course	<ul style="list-style-type: none"> To gain insights into the modern theories of bonding in coordination compounds. To learn various methods to determine the stability constants of complexes. To understand and construct correlation diagrams and predict the electronic transitions that are taking place in the complexes. To describe various substitution and electron transfer mechanistic pathways of reactions in complexes. To evaluate the reactions of octahedral and square planar complexes. 						
Course Outline	<p>UNIT-I: Modern theories of coordination compounds: Crystal field theory - splitting of d orbitals in octahedral, tetrahedral and square planar symmetries - measurement of $10Dq$ - factors affecting $10Dq$ - spectrochemical series - crystal field stabilisation energy for high spin and low spin complexes- evidences for crystal field splitting - site selections in spinels and antispinel - Jahn Teller distortions and its consequences. Molecular Orbital Theory and energy level diagrams concept of Weak and strong fields, Sigma and pi bonding in octahedral, square planar and tetrahedral complexes.</p>						
	<p>UNIT-II: Spectral characteristics of complexes: Term states for d ions - characteristics of d-d transitions - charge transfer spectra - selection rules for electronic spectra - Orgel correlation diagrams - Sugano-Tanabe energy level diagrams - nephelauxetic series - Racah parameter and calculation of inter-electronic repulsion parameter.</p>						
	<p>UNIT-III: Stability and Magnetic property of the complexes: Stability of complexes: Factors affecting stability of complexes, Thermodynamic aspects of complex formation, Stepwise and overall formation constants, Stability correlations, statistical factors and chelate effect, Determination of stability constant and composition of the complexes: Formation curves and Bjerrum's half method, Potentiometric method, Spectrophotometric method, Ion exchange method, Polarographic method and Continuous variation method (Job's method) Magnetic property of complexes: Spin-orbit coupling, effect of spin-orbit coupling on magnetic moments, quenching of orbital magnetic moments.</p>						
	<p>UNIT-IV: Kinetics and mechanisms of substitution reactions of octahedral and square planar complexes: Inert and Labile</p>						

	<p>complexes; Associative, Dissociative and SN₂ mechanistic pathways for substitution reactions; acid and base hydrolysis of octahedral complexes; Classification of metal ions based on the rate of water replacement reaction and their correlation to Crystal Field Activation Energy; Substitution reactions in square planar complexes: Trans effect, theories of trans effect and applications of trans effect in synthesis of square planar compounds; Kurnakov test.</p> <p>UNIT-V: Electron Transfer reactions in octahedral complexes: Outer sphere electron transfer reactions and Marcus-Hush theory; inner sphere electron transfer reactions; nature of the bridging ligand in inner sphere electron transfer reactions. Photo-redox, photo-substitution and photo-isomerisation reactions in complexes and their applications.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE/ TNPSC others to be solved (To be discussed during the Tutorial hours)</p>
Skills acquired from this course	<p>Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.</p>

Title of the Course	PHYSICAL CHEMISTRY-II						
Paper No.	Core – CC9						
Category	Core	Year	II	Credits	5	Course Code	T3PCIC9
		Semester	III				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	5	1	-		6		
Prerequisites	Basic knowledge of physical chemistry						
Objectives of the course	<ul style="list-style-type: none"> To understand the essential characteristics of wave functions and need for the quantum mechanics. To know the importance of quantum mechanical models of particle in a box, rigid rotor and harmonic oscillator. To apply the quantum mechanics to hydrogen and polyelectronic systems. To familiarize the symmetry in molecules and predict the point groups. To predict the vibrational modes, hybridization using the concepts of group theory. 						
Course Outline	<p>UNIT-I: Quantum models: Particle in a box-1D, two dimensional and three-dimensional, degeneracy, application to linear conjugated molecular system, free particles, ring systems. Harmonic Oscillator-wave equation and solution, anharmonicity, force constant and its significance. Rigid Rotor-wave equation and solution, calculation of rotational constants and bond length of diatomic molecules.</p>						
	<p>UNIT-II: Applications to Hydrogen and Poly electron atoms: Hydrogen atom and hydrogen like ions, Hamiltonian-wave equation and solutions, radial and angular functions, representation of radial distribution functions. Approximation methods –variation methods: trial wave function, variation integral and application to particle in 1D box. Perturbation method - first order applications. Hartreefock self-consistent field method, Hohenberg-Kohn theorem and Kohn-Sham equation, Helium atom-electron spin, Pauli exclusion principle and Slater determination.</p>						
	<p>UNIT-III: Group theory: Groups, sub groups, symmetry elements, operations, classification-axial and non-axial. Dihedral point groups- C_n, C_{nh}, D_n, D_{nh}, D_{nd}, T_d and O_h. Matrix representation and classes of symmetry operations, reducible irreducible and direct product representation. The Great orthogonality theorem – irreducible representation and reduction formula, construction of character table for C_{2v}, C_{2h}, C_{3v} and D_{2h} point groups</p>						
	<p>UNIT-IV: Applications of quantum and group theory: Hydrogen Molecule-Molecular orbital theory and Heitler London (VB) treatment, Energy level diagram, Hydrogen molecule ion; Use of linear variation</p>						

	<p>function and LCAO methods. Electronic conjugated system:Huckel method to Ethylene butadiene, cyclopropenyl, cyclo butadiene and Benzene. Applications of group theory to molecular vibrations, electronic spectra of ethylene.</p> <p>UNIT-V: Surface Phenomena: Adsorption and free energy reaction relation at inter-phase – physisorption and chemisorptions – potential energy diagram – Lannard- Jones plot – BET isotherm – surface area determination – adsorption from solution – Gibbs adsorption isotherm- solid liquid inter face- wetting and contact angle- solid gas interfaces- soluble and insoluble films. Electrical phenomenon at interfaces including Electro kinetic – micelles and reverse micelles – solubilisation – micro-emulsion or micellar emulsions.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>
Skills acquired from this course	<p>Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.</p>

Title of the Course	PHYSICAL CHEMISTRY PRACTICAL						
Paper No.	Core – CC10						
Category	Core	Year	II	Credits	4	Course Code	T3PCHC10
		Semester	III				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	-	1	5		6		
Prerequisites	Basic knowledge of physical chemistry Practical.						
Objectives of the course	<ul style="list-style-type: none"> To understand the principle of conductivity experiments through conductometric titrations. To evaluate the order of the reaction, temperature coefficient, and activation energy of the reaction by following pseudo first order kinetics. To construct the phase diagram of two component system forming congruent melting solid and find its eutectic temperatures and compositions. To determine the kinetics of adsorption of oxalic acid on charcoal. To develop the potential energy diagram of hydrogen ion, charge density distribution and Maxwell's speed distribution by computational calculation. 						
Course Outline	UNIT-I: Conductivity Experiments <ol style="list-style-type: none"> Determination of equivalent conductance of a strong electrolyte & the verification of DHO equation. Verification of Ostwald's Dilution Law & Determination of pKa of a weak acid. Verification of Kohlrausch's Law for weak electrolytes. Determination of solubility of a sparingly soluble salt. Acid-base titration (strong acid and weak acid vs NaOH). Precipitation titrations (mixture of halides only). 						
	UNIT-II: Kinetics <ol style="list-style-type: none"> Study the kinetics of acid hydrolysis of an ester, determine the temperature coefficient and also the activation energy of the reaction. Study the kinetics of the reaction between acetone and iodine in acidic medium by half-life method and determine the order with respect to iodine and acetone. 						
	UNIT-III: Phase diagram Construction of phase diagram for a simple binary system <ol style="list-style-type: none"> Naphthalene-phenanthrene Benzophenone- diphenyl amine Adsorption Adsorption of oxalic acid on charcoal & determination of surface area (Freundlich isotherm only).						
Extended Professional	Questions related to the above topics, from various competitive

Title of the Course	MOLECULAR SPECTROSCOPY						
Paper No.	Elective - EC 5						
Category	CBE-III	Year	II	Credits	3	Course Code	T3PCHECE
		Semester	III				
	Lecture	Lab Practice	Total				
Instructional hours per week	3	-	3				
Prerequisites	Basic knowledge of spectroscopy						
Objectives of the course	<ul style="list-style-type: none"> To understand UV-absorption spectra and Interpret IR spectra on basic values of IR-frequencies. To interpret the first and second order NMR spectra in terms of splitting and coupling patterns using correlation techniques such as COSY, HETCOR, and NOESY. To study the principle of ESR spectroscopy. To study the technique and fragmentation of Mass spectroscopy. To study Principle of Mossbauer spectroscopy. 						
Course outline	<p>UNIT-I: Ultraviolet and visible Spectroscopy Applications of UV- visible spectroscopy- Woodward Fischer Scott rules- applications to conjugated dienes, trienes and polyenes- unsaturated carbonyl compounds- conjugated cyclic ketones- acetophenones – benzene and its substituted derivatives- other aromatic hydrocarbons- heterocyclic systems- differentiation of position isomers- stereo-chemical factors affecting electronic spectra of biphenyl and binaphthyls- cis trans isomers- angular distortion- cross conjugation.</p> <p>Infrared Spectroscopy Organic structure determination, finger print region - identification of functional groups- hydrogen bonding, intermolecular and intra molecular- conformational aspects in cyclic 1,2 diols and 1,3 diols- transannular interactions in UV and IR – determination of reaction rates and mechanisms of reactions involving IR and UV spectroscopy- (basic aspects).</p> <p>UNIT-II: NMR spectroscopy: Chemical shift, Factors influencing chemical shifts: electronegativity and electrostatic effects; Mechanism of shielding and deshielding. Spin systems: First order and second order coupling of AB systems, Simplification of complex spectra. Spin-spin interactions: Homonuclear coupling interactions - AX, AX₂, AB types. Vicinal, germinal and long-range coupling-spin decoupling. Nuclear Overhauser effect (NOE), Factors influencing coupling constants and Relative intensities. ¹³CNMR and structural correlations, Satellites. Brief introduction to 2D NMR – COSY, NOESY. Introduction to ³¹P, ¹⁹F NMR.</p>						

	<p>UNIT-III: ESR spectroscopy: Characteristic features of ESR spectra, line shapes and line widths; ESR spectrometer. The g value and the hyperfine coupling parameter (A), origin of hyperfine interaction. Interpretation of ESR spectra and structure elucidation of organic radicals using ESR spectroscopy; Spin orbit coupling and significance of g-tensors, zero/non-zero field splitting and Kramer's degeneracy.</p> <p>UNIT-IV: Mass Spectrometry : Ionization techniques- Electron ionization (EI), chemical ionization (CI), desorption ionization (FAB/MALDI), electrospray ionization (ESI), isotope abundance, molecular ion, fragmentation processes of organic molecules, deduction of structure through mass spectral fragmentation, high resolution. Effect of isotopes on the appearance of mass spectrum</p> <p>UNIT-V: Mossbauer Spectroscopy:. Principle of Mossbauer spectroscopy: Doppler shift, recoil energy. Isomer shift, quadrupole splitting, magnetic interactions. Applications: Mossbauer spectra of high and low-spin Fe and Sn compounds.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC/ JAM /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

HEAD OF THE DEPARTMENT OF CHEMISTRY
RAJAH SERFOJI GOVT. COLLEGE
THANJAVUR - 613 005

Title of the Course	CHEMISTRY IN EVERYDAY LIFE						
Paper No.	Skill Enhancement Course - SEC2						
Category	SEC	Year	II	Credits	2	Course Code	T3PCHS2
		Semester	III				
	Lecture	Lab Practice	Total				
Instructional hours per week	3	-	3				
Prerequisites	Basic concepts of Chemistry						
Objectives of the course	<p>To study the diagnostics of sugar and cholesterol, detection of poison.</p> <p>To learn about the importance of first aid.</p> <p>To know the basics of antipyretic analgesics.</p> <p>To learn the chemistry of food adulteration and adulterants.</p>						
Course outline	Unit I Clinical chemistry: Diagnostics test for sugar in urine (Benedicts test and Fehling's test only), Diagnostics test for sugar in serum (Folin and Wu's method, Nelson-Somogyi method). Diagnostics test for cholesterol (Sackett's method) in serum- important test for cholesterol- Salkowski test and Libermann Burchaed test.						
	Unit II First aid for accidents: Important rules of first aid – articles in first aid box-First aid for burns, cuts, abrasion, bleeding, fractures, fainting, poisonous bites. Common poisons and their antidotes-acid poisoning-Alkali poisoning, Mercury poisoning, poisoning by disinfectants.						
	Unit III Medicinal chemistry: Analgesics – definition - classification - narcotic analgesics – morphine and pethidine (medicinal uses and adverse effects only (structure not needed). Antipyretic analgesics –salicylic acid derivatives – aspirin, methyl salicylate, p-aminophenol derivatives-paracetamol, phenacetin (medicinal uses and structures only).						
	Unit IV Food adulteration: Adulterants and contaminants in food – definition of adulterated food – common adulterants of milk and milk products, vegetables, fats and oil. Contamination of food with toxic chemicals- packing hazards.						
	Unit V Domestic products in day today life: Preparation of chalk crayons, writing ink, incense sticks, naphthalene balls, wax candle, face powder, tooth powder, tooth paste, gum paste and shoe polish. Methods of removing stains –nail polish, paint, iron rust, grease, tea and coffee stain.						
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC/ JAM /TNPSC others to be solved</p> <p>(To be discussed during the Tutorial hours)</p>						
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.						
Recommended Text	<p>1. Jayashree Ghosh, Fundamental Concepts of Applied Chemistry, 2nd edition, S. Chand & Co., New Delhi (2008).</p> <p>2. M.Swaminathan, Food Science and Experimental Foods, 1st edition, Ganesh and</p>

HEAD OF THE DEPARTMENT OF CHEMISTRY
RAJAH SERFOJI GOVT. COLLEGE
THANJAVUR - 613 005

Title of the Course	COORDINATION CHEMISTRY – II						
Paper No.	Core – CC11						
Category	Core	Year	II	Credits	5	Course Code	T4PCHC11
		Semester	IV				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
		5	1	-		6	
Prerequisites	Basic knowledge of inorganic chemistry						
Objectives of the course	<ul style="list-style-type: none"> To recognize the fundamental concepts and structural aspects of organometallic compounds. To learn reactions of organometallic compounds and their catalytic behaviour. To identify or predict the structure of coordination compounds using spectroscopic tools. To understand the structure and bonding in coordination complexes. To evaluate the spectral characteristics of selected complexes. 						
Course Outline	UNIT-I: Chemistry of organometallic compounds: Classification of organometallic compounds based on M-C bond – 18 and 16 electron rule; Bonding in metal – olefin complexes (example: Ziese's salt), metal-acetylene and metal-allyl complexes; Metal-cyclopentadienyl complexes – Examples and MO approach to bonding in metallocenes; fluxional isomerism. Metal – carbonyl complexes: MO diagram of CO; Structure and bonding – bonding modes, MO approach of M-CO bonding, π -acceptor nature of carbonyl group, synergistic effect (stabilization of lower oxidation states of metals); Carbonyl clusters: Low nuclearity and high nuclearity carbonyl clusters – Structures based on polyhedral skeleton electron pair theory or Wade's rule.						
	UNIT-II: Reactions and catalysis of organometallic compounds: Reactions of organometallic compounds: Oxidative addition, reductive elimination (α and β eliminations), migratory insertion reaction and metathesis reaction. Organo-metallic catalysis: Hydrogenation of olefins (Wilkinson's catalyst), hydroformylation of olefins using cobalt or rhodium catalysts (oxo process), oxidation of olefin (Wacker process), cyclo-oligomerisation of acetylenes using Reppe's catalysts.						
	UNIT-III: Inorganic spectroscopy -I: IR spectroscopy: Effect of coordination on the stretching frequency-sulphato, carbonato, sulphito, aqua, nitro, thiocyanato, cyano, thiourea, DMSO complexes; IR spectroscopy of carbonyl compounds. NMR spectroscopy-Introduction, applications of ^1H , ^{15}N , ^{19}F , ^{31}P -NMR spectroscopy in structural identification of inorganic complexes, fluxional molecules, quadrupolar nuclei- effect in NMR spectroscopy.						
	UNIT-IV: Inorganic spectroscopy-II: Introductory terminologies: g						

	<p>and A parameters-definition, explanation and factors affecting g and A; Applications of ESR to coordination compounds with one and more than one unpaired electrons – hyperfine and secondary hyperfine splitting and Kramer’s doublets; ESR spectra of V(II), Mn(II), Fe(II), Co(II), Ni(II), Cu(II) complexes and bis(salicylaldehyde)copper(II).</p> <p>UNIT-V: Photo Electron Spectroscopy: Theory, Types, origin of fine structures - shapes of vibrational fine structures – adiabatic and vertical transitions, PES of homonuclear diatomic molecules (N₂, O₂) and heteronuclear diatomic molecules (CO, HCl) and polyatomic molecules (H₂O, CO₂, CH₄, NH₃) – evaluation of vibrational constants of the above molecules. Koopman’s theorem- applications and limitations.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Course Learning Outcomes (for Mapping with POs and PSOs)	
Students will be able:	
CO1: Understand and apply 18 and 16 electron rule for organometallic compounds	
CO2: Understand the structure and bonding in olefin, allyl, cyclopentadienyl and carbonyl containing organometallic compounds	
CO3: Understand the reactions of organometallic compounds and apply them in CO4: understanding the catalytic cycles	
CO5: Identify / predict the structure of coordination complexes using spectroscopic tools such as IR, NMR, ESR, Mossbauer and optical rotatory dispersion studies to interpret the structure of molecules by various spectral techniques.

Title of the Course	ANALYTICAL INSTRUMENTATION TECHNIQUE PRACTICAL						
Paper No.	Core – CC12						
Category	Core	Year	II	Credits	5	Course Code	T4PCHC12
		Semester	IV				
Instructional hours per week	Lecture	Tutorial	Lab Practice		Total		
	-	1	5		6		
Prerequisites	Basic knowledge of physical chemistry						
Objectives of the course	<ul style="list-style-type: none"> To understand the principle of conductivity experiments through conductometric titrations. To evaluate the order of the reaction, temperature coefficient, and activation energy of the reaction by following pseudo first order kinetics. To construct the phase diagram of two component system forming congruent melting solid and find its eutectic temperatures and compositions. To determine the kinetics of adsorption of oxalic acid on charcoal. To develop the potential energy diagram of hydrogen ion, charge density distribution and Maxwell's speed distribution by computational calculation. 						
Course Outline	UNIT-I:						
	<ol style="list-style-type: none"> Determination of the equivalent conductance of a weak acid at different concentrations and verifying Ostwald dilution law. Calculation of the dissociation constant of the acid. Determination of the equivalent conductance of a strong electrolyte at different concentrations and examining the validity of the Onsager's theory as limiting law at high dilutions. Conductometric titration of a mixture of HCl and CH₃COOH Vs NaOH. Conductometric titration of NH₄Cl Vs NaOH. Conductometric titration of CH₃COONa Vs HCl. Potentiometric titration of a mixture of HCl and CH₃COOH Vs NaOH Determination of pK_a of weak acid by EMF method. Potentiometric titration of FAS Vs K₂Cr₂O₇ Potentiometric titration of KI Vs KMnO₄. Potentiometric titration of a mixture of Chloride and Iodide Vs AgNO₃. Determination of the pH of buffer solution by EMF method using Quinhydrone and Calomel electrode. Study of the inversion of cane sugar in the presence of acid by Polarimetric method. 						
	UNIT-II:						
	<ol style="list-style-type: none"> Estimation of Na and K by flame photometric method. Determination of spectrophotometrically the mole ratio of the ferrithiocyanate complex and equilibrium constant for the 						

	<p>complex formation.</p> <ol style="list-style-type: none"> 3. Estimation of the amount of sulphate present in the given solution using Nephelometric turbidimeter. 4. Estimation of the amount of nitrate present in the given solution using spectrophotometric method. 5. Heavy metal analysis in textiles and textile dyes by AAS 6. Determination of caffeine in soft drinks by HPLC 7. Analysis of water quality through COD, DO, BOD measurements. 8. Assay of Riboflavin and Iron in tablet formulations by spectrophotometry 9. Estimation of chromium in steel sample by spectrophotometry 10. Separation of (a) mixture of Azo dyes by TLC (b) mixture of metal ions by Paper chromatography 11. Estimation of chlorophyll in leaves and phosphate in waste water by colorimetry.
	<p>UNIT-III: Interpretation and identification of the given spectra of various organic compounds arrived at from the following instruments</p> <ol style="list-style-type: none"> 1. UV-Visible 2. IR 3. Raman 4. NMR 5. ESR 6. Mass etc.,
Extended Professional Component (is a part of internal component only. 		Semester	IV				
	Lecture	Lab Practice	Total				
Instructional hours per week	2	8	10				
Prerequisites	Knowledge on research						
Objectives of the course	<ul style="list-style-type: none"> To gain the depth knowledge in laboratory field To understand the basic principles of research To study the methodology of the research work To apply the various spectra for compound interpretation To know the knowledge of presenting project work 						

Course Outcomes (CO)

On successful completion of the course, scholars will be able to

Course Learning Outcomes (for Mapping with POs and PSOs)

Students will be able:

CO1: Gain of background knowledge in specific area of chemical sciences

CO2: Learn the steps involved in solving a problem

CO3: Understand the formatting of table work

CO4: Enter in the first step of research aptitude

CO5: Visualize the steps of project work presentation

 HEAD OF THE DEPARTMENT OF CHEMISTRY
 RAJAH SERFOJI GOVT. COLLEGE
 THANJAVUR - 613 005

TITLE OF THE COURSE	NANO AND COMPUTATIONAL CHEMISTRY						
Paper No.	Elective – EC6						
Category	EC	Year	II	Credits	3	Course Code	T4PCHECF
		Semester	IV				
	Lecture	Lab Practice	Total				
Instructional hours per week	4	-	4				
Prerequisites	Basic knowledge of Nano and Computational Chemistry						
Objectives of the course	<ul style="list-style-type: none"> To learn the fundamental concepts of nano science and technology To know the various classes of nanomaterials. To learn the Carbon Clusters and Nanostructures To gain the depth knowledge in computer with chemistry. To know the system software and computer networks. 						
Course outline	Unit I : What is nano –Why nano –Nanomaterials characteristic differences over bulk materials –Synthesis of nanomaterials, Bottom – up vs. top – down approaches – RF Plasma, Chemical methods, Thermolysis, Pulse laser methods- Micro Electro Mechanical Systems[MEMS] & Nano Electro Mechanical System (NEMS).						
	Unit II : Different classes of nanomaterials- Metal and Semiconductor Nanomaterials. Quantum Dots, Wells and Wires, Characterization – Crystallography(XRD),Transmission Electron Microscopy(TEM), Scanning Microscopy (SEM,STM&AFM).						
	Unit III: Carbon Clusters and Nanostructures: Nature of carbon bond – new carbon structures – carbon clusters – discovery of C60–alkali doped C60–superconductivity in C60–larger and smaller fullerenes.Carbon nanotubes – synthesis – single walled carbon nanotubes – structure and characterization – mechanism of formation – chemically modified carbon nanotubes –doping – functionalizing nanotubes – applications of carbon nanotubes. Nanowires –synthetic strategies – gas phase and solution phase growth – growth Control – properties.						
	Unit IV: Computational Chemistry: What you can do with computational chemistry, The tools of computational chemistry,Putting it all together, The philosophy of computational chemistry. The concept of the Potential Energy Surface-Perspective, Stationry Points, The Born-Oppenheimer approximation, Geometry optimization, Stationary points and normal- mode vibrations: ZPE, Symmetry.						
	Unit V : Introduction to computers and computing: basic organization of a computer-CPU- main memory-secondary storage-I /Odevices- software- system and application software-high and low level languages- computers- algorithms and flowcharts. Introduction to networking: computer networks-network components-hubs, switches, repeaters, routers, bridges-routers and gateways- network topologies- star, bus and ring-LAN, WAN,Intranet and Internet- worldwideweb-internet for chemists-online search of chemistry data bases- search engines for chemistry-chemweb-e-journals.						

Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC/ JAM /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.
Recommended Text	1. B.K Sharma, Industrial Chemistry, Goel Publishing House, Meerut (2003). 2. Title of the Course	INDUSTRIAL CHEMISTRY						
Paper No.	Professional Competitive Skill - PCS						
Category	PCS	Year	II	Credits	2	Course Code	T4PCHS3
		Semester	IV				
	Lecture	Lab Practice	Total				
Instructional hours per week	4	-	4				
Prerequisites	Basic knowledge of Industrial chemistry						
Objectives of the course	<ul style="list-style-type: none"> To enable the general and basic scientific concepts required for industrial technology, the concepts in solving industrial problems. To gain knowledge in the new developments in engineering and technology. To familiarize with concepts, theories, processes and applications for industry. To study on the electrochemical processes involved in industries. 						
Course outline	<p>Unit I : Basic ideas about chemical industries: Flow charts- chemical conversion – Batch versus continuous processing – chemical process economics – market survey – plant location – Research and development and its role in chemical industries.</p> <p>Water Treatment: pollution of water by fertilizer, detergent and pesticide industries – BOD, COD – Scales and Sludge formation-Alkalinity of water Hardness of water-Types of hardness-Removal of hardness of water – ion exchange, reverse osmosis, Lime soda process. Treatment of water for domestic use-Municipal water Treatment</p> <p>Unit II : Cement: Manufacture - Hot process and dry process – major constituents – setting of cement –Types of cement-Grading of cement-reinforced concrete – cement industries in India.</p> <p>Glass: types – composition – manufacture of optical glass, colored glass and neutron absorbing glass</p> <p>Fertilizers: Fertiliser industries in India – manufacture of ammonia – ammonia salt, urea, super phosphate, triple super phosphate, NPK and potassium salts.</p> <p>Unit III : Sugar: Manufacture, recovery of sugar from molasses, Cultivation of sugar -sugar industries in India.</p> <p>Cleansing agents: Preparation of toilet and washing soaps- synthetic detergents – alkyl, aryl sulphonates, builders, Disinfectants and Antiseptics Types of cleansing agents. Criteria of selection</p> <p>Paints: Primary constituents of paints – dispersion medium (solvent) – binders' pigments- oil based paints – latex paints – requirements of a good paint Types of paints. Difference between paints and varnishes</p>						

	<p>Unit IV Rubber industries: Natural rubber – synthetic rubber – – Types of polymerization –Mechanism of polymerization-Preparation properties and uses of Buna-S-Rubber, styrene – neoprene – polyurethane rubber .Vulcanization of rubber</p> <p>Plastics: Manufacture – resin – Types of plastics-oligomers,High polymers Thermo plastics and Thermosetting plastics-preparation, properties and uses of nylon 6 ,nylon 66, polyester and terelene.</p> <p>Unit V: Coal: Fossil fuels-Origin and imporatance of coal – types – composition –Classification of coal by grade Analysis of coal. Proximate and ultimate- coal gasification – carbonization – coal tar based chemicals - coal mines in India.</p> <p>Petroleum: Origin – refining Fractional distillation – cracking – knocking – octane and cetane numbers – LPG – synthetic gas and synthetic petrol.</p> <p>Fuel gases: Large scale production, storage, hazards and uses of coal gas, water gas, producer gas and oil gas.</p>
Extended Professional Component (is a part of internal component only. Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC/ JAM /TNPSC others to be solved (To be discussed during the Tutorial hours)

**SYLLABUS FOR
M.Phil. Programme in Chemistry
CBCS - LOCF**

&

TAMILNADU STATE COUNCIL FOR HIGHER EDUCATION

Effective from the Academic Year 2023-2024

PROGRAMME OBJECTIVES (POs)

On Completion of the programme, the scholars will have the capacity to

PO1	motivate themselves and develop an interest in planning and implementation of research.
PO2	handle equipments needed for material preparation, characterization and to analyze and interpret the data with theoretical background and software.
PO3	practice the teaching-learning process by being the proponent in classroom and laboratory experience.
PO4	apply the scientific context to develop innovative ideas, products and methods and Adopt changes in the environment with high integrity and transpire ethical professionals.
PO5	recognize and integrate life-long learning skills to become pro-active in personal and professional live.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

After Completion of the programme, the scholars will have the capacity to

PSO1	impart research knowledge in advanced concepts and its applications in various fields and to develop capability in organizing and presenting the acquired knowledge in written discourse.
PSO2	develop the critical analysis and problem-solving skills and to gain versatile knowledge about the use of computers and available software in chemistry.
PSO3	attain complete knowledge about the basics of characterization Techniques and to acquire knowledge about chemistry of heterocyclic, organic reaction mechanism, crystal growth, deep eutectic solvent system and reaction kinetics.
PSO4	apply the spectroscopic and chromatographic techniques and to learn how to interpret the data for well known compounds, which are helpful to predict the unknown molecules.
PSO5	design their own research project based on their firm theoretical understanding and to get sufficient expertise in the operational knowledge and laboratory skills in all major fields of chemistry.

Rajah Serfoji Govt. College (Autonomous), Thanjavur – 613 005
M.Phil, Chemistry –LOCF with CBCS Pattern

Core Courses	-	4 (each of 4 credits)
Project	-	1 (8 credits)
Total	-	5 (24 credits)

Separate passing minimum is prescribed for Internal and External

- The passing minimum for CIA shall be 40% out of 25 Marks. (i.e., 10 Marks)
- The passing minimum for Autonomous Examinations shall be 40% out 75Marks. (i.e. 30 Marks)
- The passing minimum not Less than 50% in the aggregate

Semester	Code	Course	Title of the Paper	Hours/Week	Credits	Medium
I	T1MCH1	CC-I	Research Methodology	4	4	English

Course Objectives

- To impart knowledge on research methodology
- To gain the depth information of statistical analysis.
- To know the various spectroscopic methods.
- To gain the knowledge about different chromatographic techniques.
- To understand the deep sense about electro analytical techniques.

Course Outcomes (CO)

On successful completion of the course, scholars will be able to

CO No	CO-Statements
CO1	gain the versatile knowledge about different types of literature search and indexes and to know about the preparation and presentation of reports.
CO2	acquire problem solving capacity, interpretation of results with the use of error analysis, correlation methods and computer application.
CO3	report and discuss the principles and applications of X-ray spectroscopy, Molecular luminescence, Fluorometry and phosphorimetry.
CO4	understand the basic principles and applications of chromatography and electrophoresis.
CO5	attain in-depth knowledge about polarography, amperometric titrations and ion selective electrodes.

UNIT I

Literature Survey

Source of information: primary, secondary and tertiary – sources: Journals, Abstracts, Current Titles, Reviews, Monographs and Dictionaries – Information retrievals: using internet and other electronic Medias (preparing a review article related to problem of research of the student) E journals and data bases – search engines: Google and Yahoo search and Wikipedia. Reports and research work – laboratory observation – preparation of records and manuscripts – Research paper formats in Indian Journal of Chemistry, Journal of Indian Chemical Society, Journal of American Chemical Society, Tetrahedron Letters, Journal of Chemical Education, etc., - Writing of the project reports of thesis – IUPAC nomenclature of organic & inorganic Compounds.

UNIT II

Error Analysis

Types of Error – Accuracy, precision, significant figures, use of calculus in the estimation of errors – Frequency distributions, the binomial distribution, the Poisson distribution and normal distribution – Describing Data, population and sample, mean, variance, standard deviation, way of quoting uncertainty, robust estimators, repeatability and reproducibility of measurements – Hypothesis testing, levels of confidence and significance, test for an outlier, testing variances, means t-Test, Paired t-Test – Analysis of variance (ANOVA) – Correlation and Regression– Curve fitting, Fitting

of linear equations, simple linear cases, weighted linear case, analysis of residuals – General polynomial equation fitting, linear zing transformations, exponential function fit – r and its abuse Multiple linear regression analysis, elementary aspects – Applications of some computer packages like MS-Excel, Origin.

UNIT III

X-ray Spectroscopy

Introduction, Mosley's law, X-ray instrumentation, X-ray absorption X-ray emission methods, X-ray emission vs X-ray absorption, X-ray diffraction, Bragg's law. Automated X-ray diffractometry, Determination of crystal structure, Interpretation of X-ray diffraction pattern, Applications.

Molecular luminescence, Fluorometry and phosphorimetry

Introduction, Principles of fluorescence phosphorescence, Interpretation of fluorescence spectra, Factors, fluorescence intensity and concentration, instrumentation for fluorometry, Types of filter fluorometry, Reporting fluorescence spectra, Applications of fluorometry – Some special determinations.

UNIT IV

Chromatography and Separation Techniques

Solvent extraction – Principles of ion exchange, paper, thin layer and column chromatography – Gas Chromatography techniques – Columns, adsorbents, methods, Rf values, McReynold's constants and their uses – HPTLC, HPLC techniques – Adsorbents, columns, detection methods, estimations, preparative column – GC-MS techniques: methods, principles and uses. Electrophoresis: Principles, factors affecting ionic migration – Effect of pH and ionic strength – Gel electrophoresis.

UNIT V

Electro analytical Techniques

Voltammetry – Polarography – Principles and introduction, Current – voltage relationship, Polarogram interpretation, Half wave potential, Reversible and Irreversible waves – residual, Migration and Diffusion currents, the Dropping Mercury Electrode (DME), Advantages of DME – Advantages and Applications of polarography. Amperometric Titrations – Principles, Titrations with two indicators – Instrumentation, Titration procedure, Advantages and Disadvantages, Applications. Ion selective electrodes – Glass – Membrane, Liquid – Membrane, Solid state Membrane, and their applications.

Course Objectives

- To understand the principles of NMR spectroscopy
- To apply the NMR technique for the quantitative and structural analysis of chemical compounds.
- To know the deep information of NQR and Mossbauer spectroscopy.
- To recollect the fundamentals and application of ESR spectroscopy.
- To study the applications of EPR Spectroscopy.

Course Outcomes (CO)

On successful completion of the course, scholars will be able to

CO No.	CO-Statements
CO1	understand principles and applications of NMR spectroscopy for ^1H , ^{19}F , ^{31}P & ^{13}C
CO2	Obtain the deep knowledge about first order and second order coupling constant and to apply the proton NMR in MRI.
CO3	Acquire the deep sense about the characteristics of quadrupolar nuclei using NQR spectroscopy and to know the principles and applications of Mossbauer spectroscopy.
CO4	Get a thorough knowledge about ESR spectroscopy includes Double resonance, CINDNP and CIDEP techniques.
CO5	Attain in-depth knowledge about the applications of EPR spectroscopy to various inorganic compounds and metallobiomolecules.

UNIT I

NMR Spectroscopy: Principles: Definition of nuclear angular momentum and the nuclear magnetic moment Idea about the rotating axis system – Bloch equations – Quantum mechanical description of the NMR experiment, transition probabilities – Relaxation effects – Fourier transform NMR – Measurement of T_1 and T_2 - Effect of quadrupolar nuclei evaluation of thermodynamic and kinetic data using NMR techniques – Second order spectra – Quantum mechanical treatment of coupling effects of relative magnitudes of J on the spectrum of an AB molecule - Spectral simplification and determination of signs of coupling constants. Systems with chemical exchange – Evaluation of thermodynamic parameters in simple systems – Study of fluxional behaviour of molecules an elementary treatment of second order spectra-examples.

NMR Spectroscopy: Applications to Inorganic Systems ^1H , ^{19}F , ^{31}P , ^{13}C – Applications in probing inorganic structures, study of fluxional behavior in organometallics, evaluation of thermodynamic parameters – NMR of paramagnetic molecules – isotropic shifts – Contact and pseudo-contact shifts-Lanthanide shift reagents.

UNIT II

NMR Spectroscopy: Proton and Carbon NMR-Examples for different spin systems – Chemical shifts and coupling constants (Spin-spin coupling) involving different nuclei (^1H , ^{19}F , ^{31}P , ^{13}C) – interpretation and applications to inorganic compounds – Effect of quadrupole nuclei (^2H , ^{10}B , ^{11}B) on the proton NMR spectra. Satellite spectra.

^1H NMR Spectroscopy – Coupling constant – First order and second order splitting – Spin-spin splitting. Dependence of J on dihedral angle – Vicinal and geminal coupling constants – Karplus equation – Long range coupling constants - Influence of stereochemical factors on chemical shift of protons – Simplification of complex spectra – Double resonance techniques – Shift reagents – Chemical spin decoupling of rapidly exchangeable protons (OH, SH, COOH, NH, NH_2) – An elementary treatment of NOE phenomenon – 2D Techniques (COSY, NOESY and ROESY)

Application of Proton NMR in MRI - ^{13}C NMR spectroscopy – Basic theory of FT-NMR – Relaxation. Broad band decoupling – Off resonance decoupling and chemical shift correlations (CH , CH_2 , CH_3 , aromatic) – Identification of structure based on NMR data – Problems.

UNIT III

NQR Spectroscopy: Introduction – Characteristics of quadrupolar nuclei – Effects of field gradient and magnetic field upon quadrupolar energy levels – NQR transitions – Applications of NQR spectroscopy.

Mossbauer Spectroscopy: Introduction – Isomer shift – Magnetic interactions – Mossbauer emission spectroscopy – Applications to iron and tin Compounds.

UNIT IV

Electron Spin Resonance Spectroscopy-Basic concepts of ESR spectroscopy – Spin densities and McConnell equation –Hyperfine splitting – Factors affecting the magnitude of g and A values – Anisotropy in g and A values – ESR spectra of free radicals in solution: methyl, allyl, vinyl and related radicals, benzene anion, benzo- semiquinone, pntrobenzoate dianion – naphthalene dianion, – Spin-trapping – CINDNP and CIDNP techniques – Double resonance in ESR – Advantages of ENDOR spectroscopy.

UNIT V

Electron Paramagnetic Resonance Spectroscopy:Applications of EPR to some simple inorganic systems such as Xe^{2+} – Factors affecting the magnitude of g and A tensors in metal complexes – Zero-field splitting and Kramers degeneracy – Spectra of VO(II), Mn(II), Fe(II), Co(II), Ni(II) and Cu(II) complexes – EPR spectra of dinuclear Cu(II) complexes - Applications of EPR to a few metalloproteins containing Cu(II) and Fe(II) ions. Basic principles of ENDOR spectroscopy and its applications in inorganic Chemistry.

Semester	Code	Course	Title of the Paper	Hours/Week	Credits	Medium
I	T1MPTL3	CC-3	Teaching and Learning Skills	4	4	English

Course Objectives

- ❖ To understand the basic knowledge about computer system and their functions
- ❖ To gain the basic knowledge about communication skills
- ❖ To understand the communication process through the web
- ❖ To study the basics of Instructional Technology
- ❖ To know the types and various skills of teaching

Course Outcomes (CO)

On successful completion of the course, scholars will be able to

CO No.	CO-Statements
CO1	understand the develop skills of ICT and apply them in teaching learning context and Research.
CO2	acquire the knowledge of communication skill with special reference to its elements, types, development and styles.
CO3	gain the depth understanding in communication Technology and Computer mediated teaching and develop multimedia / e- content in their respective subject.
CO4	acquire the complete knowledge about Instructional Technology and its Applications.
CO5	developthe different kinds of teaching skills for putting the content across to the participants.

Unit I:Computer Application Skills

Computer system: Characteristics, Parts and their functions – Different generations of Computer – Operation of Computer: switching on / off / restart, Mouse control, Use of key board and some functions of key – Information and 8 Communication Technology (ICT): Definition, Meaning, Features, Trends – Integration of ICT in teaching and learning – ICT applications: Using word processors, spread sheets, Power point slides in the classroom – ICT for Research: On-line journals, e-books, Courseware, Tutorials, Technical reports, Theses and Dissertations

Unit II :Communication Skills

Communication: Definitions – Elements of Communication: Sender, Message, Channel, Receiver, Feedback and Noise – Types of Communication: Spoken and written; Non-verbal communication – Intrapersonal, Interpersonal, Group and Mass communication – Barriers to communication: Mechanical, Physical, Linguistic & Cultural – Skills of communication: Listening, Speaking, Reading and writing – Methods of developing fluency in oral and written communication – style, Diction and Vocabulary – Classroom communication and dynamics

Unit III:Communication Technology

Communication Technology: Bases, Trends and Developments – Skills of using Communication Technology – Computer Mediated Teaching: Multimedia, Econtent – Satellite-based communication: EDUSAT and ETV channels, Communication through web: Audio and Video applications on the Internet, interpersonal communication through the web.

Unit IV:Pedagogy

Instructional Technology: Definition, Objectives and Types – Difference between Teaching and Instruction – Lecture Technique: Steps, Planning of a Lecture, Delivery of a lecture – Narration in tune with the nature of different disciplines – Lecture with power point presentation – Versatility of lecture technique – Demonstration, Characteristics, Principles, Planning Implementation and Evaluation – Teaching – Learning Techniques: Team Teaching, Group discussion, Seminar, Workshop, Symposium and Panel Discussion – Models of teaching: CAI, CMI and WBI

Unit V: Teaching Skills

Definition, Meaning and Nature – Types of Teaching skills: Skill of Set Induction, Skill of Stimulus

Variation, Skill of Explaining, Skill of Probing Questions, Skill of Black Board writing and Skill of Closure

– Integration of Teaching Skills – Evaluation of Teaching Skills

GUIDE: Dr. M. RAVISHANKAR
ASSOCIATE PROFESSOR OF CHEMISTRY

Course Objectives

- ❖ To understand the basic concept of drugs
- ❖ To study the basic knowledge of drug delivery
- ❖ To impart knowledge in drug designing
- ❖ To know the Principles of Combinatorial Synthesis
- ❖ To understand the Application of Drugs for Treatment

Course Outcomes (CO)

On successful completion of the course, scholars will be able to

CO No.	CO-Statements
CO1	get in-depth knowledge about the nomenclature and mechanism of drugs
CO2	Get the complete idea about SAR activity and drug metabolism
CO3	Get detailed knowledge about drug design and pharmacokinetic issues.
CO4	impart the knowledge on the Combinatorial synthesis for drug discovery
CO5	Attain depth the knowledge in the structure, properties and mechanism of different kinds of drus.

UNIT I

Nomenclature and Mechanism of Drugs

Introduction – Study of drugs – Important terminologies in pharmaceutical chemistry – Classification and nomenclature of drugs – Nomenclature of some heterocyclic systems – Mechanism of action of drugs – metabolism of drugs – Absorption of drugs – Assay of drugs.

UNIT II

Drug Discovery and Development

Introduction – Choosing a drug target – Identifying a bioassay – Finding a lead compound – Structure-activity relationship(SAR) – Identification of a pharmacophore – Drug metabolism – Manufacture-synthetic issues – Toxicity – Clinical trials – Patents.

UNIT III

Drug Design and Pharmacokinetics

Drug design: Variation of substituents, chain extension, ring expansions/contractions, ring variations, ring fusions, isosteres, rigidification of the structure, conformational blockers.

Pharmacokinetics: Pharmacokinetics issues in drug design – Solubility and membrane permeability – Resistant to hydrolysis and metabolism – Targeting drugs – Reducing toxicity – Prodrugs – Methods of administration – Formulation.

UNIT IV

Combinatorial Synthesis

Introduction – Combinatorial synthesis for drug discovery – Solid phase techniques – Methods of parallel synthesis – Mixed combinatorial synthesis – Deconvolution – Structure determination of the active compound – Limitations – Examples – Designing a combinatorial synthesis – Testing for activity.

UNIT V

Application of Drugs for Treatment

Structure, properties and mechanism of action of the following: Antibacterial drugs – Sulpha drugs: Sulphanilamide, Sulphadiazine, Sulphapyridine. Antibiotics – Chloramphenicol, Penicillin, Streptomycin. Antiseptics and disinfectants: Phenol and its derivatives, Halogen compounds and organic mercurials. Analgesics: Morphine, Heroin, Pethidine, Morphine. Anticonvulsants: Barbiturates, Oxazolindiones. Diabetes: Control of diabetes, Insulin. Cancer and anti neoplastic drugs: Alkylating agents, Anti metabolites, Plant products. Cardio vascular drugs: Anti arrhythmic drugs, Anti hypertension drugs.

GUIDES: 1. Dr. N. INGARSAL 2 .Dr. C. KATHIRAVAN AND 3. Dr. J. ELONGOVAN

ASST.PROFESSORS OF CHEMISTRY

Course Objectives

- ❖ To know the common Laboratory practices
- ❖ To study some benzodiazepine, thiazine and pyrimidine derivatives
- ❖ To understand the multicomponent reactions
- ❖ To get the deep knowledge on novel pyrazoline derivatives
- ❖ To attain the detailed information about transition metal complexes.

Course Outcomes (CO)

On successful completion of the course, scholars will be able to

CO No.	CO-Statements
CO1	Get sufficient expertise in the usage, handling and safety management of chemicals in laboratory
CO2	get in-depth knowledge about the synthesis and various applications of some benzodiazepine, thiazine and pyrimidine derivatives
CO3	Recollect the fundamentals and synthetic utility of various multicomponent reactions
CO4	Understand the synthesis and characterization of some novel pyrazoline derivatives.
CO5	Obtain the deep sense about the synthesis, properties and biological studies of some transition metal complexes.

UNIT-1

Laboratory Techniques

Documentation and records. Cleaning of glassware and apparatus in chemistry lab, assembling the apparatus, use of inert atmosphere, measurement and control of basic reaction parameters, addition of reagents, concentration and isolation of products. Safety-Accident management, personal protective equipment, identification of chemicals-Chemical spillage, electrical shock, eye injuries, ingestion and inhalation of chemicals. Collection and disposal of waste and hazardous chemicals.

UNIT-II

Synthesis and Characterization

Synthesis of 1,4-benzodiazepine, 1,5-benzodiazepine, diazepinols and diazepinones - Characterization. Synthesis and antimicrobial studies of 1,3-thiazines and Pyrimidine derivatives - Characterization. Applications of benzodiazepine, thiazines and pyrimidine derivatives.

UNIT-III

Multicomponent Reactions

Reaction pathway of Biginelli, Hantzsch, Mannich, Passerini and Ugi multicomponent reactions – mechanisms based on Knoevenagel, Enamine formations, urea and thiourea additions, iminium intermediates, Lewis acid and base catalyzed reactions – synthetic utility and important features of multicomponent reactions.

UNIT-IV

Novel Pyrazoline Derivatives

Nomenclature of different substituted pyrazoline derivatives. Synthesis of 4, 5-dihydropyrazolines carrying pyrimidine moiety and 2-pyrazoline derivatives carrying other heterocyclic moiety through microwave, conventional and grinding methods. Mechanism of formation of different 2-pyrazoline compounds and their spectral characterizations by using FT-IR, ¹H NMR, ¹³C-NMR and ESI-MS techniques.

UNIT-V

Transition Metal Complexes

Synthesis, Spectroscopy, Thermal Analysis, Magnetic Properties and Biological studies of some transition metal complexes with organic ligands. Like Zn(II), Ni(II) and Co(II) Complexes with Schiff Base Ligands.

GUIDE: Dr. R. CHITHIRAVEL
ASST.PROFESSOR OF CHEMISTRY

Course Objectives

- ❖ To state the Hard and Soft Acid Base principles in synthetic organic chemistry
- ❖ To describe a “reactive intermediate” in organic synthesis
- ❖ To identify the stereo chemical and conformational effect
- ❖ To illustrate the molecular rearrangement involving electron deficient atom
- ❖ To study how the functional group rearrangements involved in various steps

Course Outcomes (CO)

On successful completion of the course, scholars will be able to

CO No.	CO-Statements
CO1	Use curly arrow reaction mechanisms and knowledge of the relative stability of intermediates to predict and / or account for the products of reactions
CO2	Recognize the functional group transformation
CO3	Design experiments to probe asymmetric induction mechanisms
CO4	Recognize principle of stereochemistry
CO5	Combine reactions to achieve simple synthesis of target molecules.

UNIT I

Basic concepts in organic chemistry

Hard and Soft Acid Base principles - Types of organic reactions – substitution, elimination and addition reactions – Reactive intermediates – stereochemical and conformational effects on reactivity and specificity; reaction with diboranes and peracids - Michael reaction- Robinson annulation – Reactivity umpolung – acyl anion equivalent- Molecular rearrangements involving electron deficient atoms.

UNIT II

Reagents and reactions

Functional group transformations – Reagents for the inter conversion of various groups – Special and specific oxidizing agents, reducing agents and organo metallic compounds for the inter conversions – The survey of reactions and reagents – Gilman’s reagent – LDA – DCC – 1,3-dithiane – Trimethyl silyl iodide – Wilkinson’s catalyst – OsO₄ – DDQ – SeO₂.

UNIT III

Asymmetric synthesis

Chiral auxiliaries, methods of asymmetric induction – substrate, reagent and catalyst controlled reactions; determination of enantiomeric and diastereomeric excess; enantio-discrimination. Resolution – optical and kinetic.

UNIT IV

Principles of stereochemistry

Configurational and conformational isomerism in acyclic and cyclic compounds; stereogenicity, stereoselectivity, enantioselectivity, diastereoselectivity and asymmetric induction.

UNIT V

Heterocyclic compounds

Synthesis and reactivity of common heterocyclic compounds containing one or two heteroatoms (O, N, S).

Semester	Code	Course	Title of the Paper	Hours/Week	Credits	Medium
I	T1MCH4D	CC-4	Chemistry of Polymers and Deep Eutectic Solvents	4	4	English

GUIDES: Dr. D. ILANGESWARAN and Dr. T. RAJKUMAR
ASSOCIATE PROFESSORS OF CHEMISTRY

Course Objectives

- ❖ To understand the basic knowledge of polymers
- ❖ To know the synthetic methodologies of polymers
- ❖ To study the character analysis of synthesized polymers
- ❖ To determine the characterization of polymers using FTIR and NMR Spectra
- ❖ To impart the knowledge on deep eutectic system

Course Outcomes (CO)

On successful completion of the course, scholars will be able to

CO No.	CO-Statements
CO1	Obtain in depth knowledge about different kinds of polymerization and their influence on the development of new materials
CO2	understand the versatile knowledge about the electrochemical and mechano chemical synthesis of polymers
CO3	determine the composition and microstructure of polymers using various kinds of microscopic techniques
CO4	Attain in-depth knowledge about polymers characterization using FTIR and NMR Spectra
CO5	Get the detailed information about the synthesis, characterization and applications of deep eutectic solvent.

UNIT 1

General procedures in chain-growth polymerization:

Free-radical chain polymerization - Anionic polymerization - Ring-opening polymerizations initiated by anionic reagents - Coordination polymers

Step-growth polymerization—basics and development of new materials:

The synthesis of an aromatic polyamide - Preparation of a main-chain liquid crystalline poly(ester ether) with a flexible side-chain - Non-periodic crystallization from a side-chain bearing copolyester. A comparison of melt polymerization of an aromatic di-acid containing an ethyleneglycol spacer with polymerization in a solvent and dispersion in an inorganic medium - Synthesis and extraction of cyclic oligomers of poly(ether ketone) - Synthesis of some sulfone-linked paracyclophanes from macrocyclic thioethers

UNIT 2

The synthesis of conducting polymers based on heterocyclic compounds

Introduction - Electrochemical synthesis - Synthesis of polypyrrole - Synthesis of polyaniline - Synthesis of polythiophene.

Chemical Synthesis of polymers:

Nitrogen-containing mesoporous polymers - synthesis of sulfonated block copolymers - poly(4-aminodiphenylamine)/Ag nanocomposite - Polydiphenylamine/carbon nanotube composites
polystyrene-graft-palmitic acid copolymers - poly(propylene imine) dendrimer-Polypyrrole.
Mechanochemical Preparation of Polymers: Polydiphenylamine - polypyrrole nanospheres.

UNIT 3

Polymer characterization

Introduction - Synthetic routes to polymers - Molecular weight determination - Composition and microstructure - Optical microscopy - Electron microscopy - Analytical microscopy - Scanning probe microscopy - Thermal analysis - Molecular relaxation spectroscopy - X-ray and neutron scattering methods

UNIT 4

Polymers Characterization Using FTIR and NMR Spectra

poly(MA-alt-NIPA) copolymer – copolymer matrix of P(MMA-MAh) - copolymerization study of *p*-toluidine and *o*-aminophenol - Copolymerization of aniline with *m*-nitroaniline - properties of soluble sulfonated polybenzimidazoles - Poly(benzoxazine-co-urethane)s - characterization of an electrochromic material from poly(1,4-bis(3-methylthiophen-2-yl)benzene)

UNIT 5

Deep Eutectic Solvents (DES)

Deep Eutectic Solvents - Synthesis, Properties and Applications; Role of DES in the synthesis of Polymers and related materials; Applications of DES in nano-technology

 11. Analysis of the interaction using FTIR within the components of OREC composite GPE based on the synthesized copolymer matrix of P(MMA-MAh), Yun Huang, Xiaoyan Ma, Guozhen Liang, Shuhui Wang, Qilu Zhang, *Polymer* 49 (2008) 2085-2094.
 12. Electrochemical copolymerization study of o-toluidine and o-aminophenol by the simultaneous EQCM and in situ FTIR spectroelectrochemistry, Qin Yanga, Youyu Zhang, Haitao Li, Yuqin Zhang, Meiling Liu, Jiao Luo, Liang Tan, Hao Tang, Shouzhao Yao, *Talanta* 81 (2010) 664–672.
 13. Copolymerization of aniline with m-nitroaniline and removal of m-nitroaniline from aqueous solutions using a polyaniline-modified electrode: A comparative study, Lian Dinga, Qin Li, Dandan Zhou, Hao Cui, Rong Tang, Jianping Zhai, *Electrochimica Acta* 77 (2012) 302-308.
 14. Synthesis and properties of soluble sulfonated polybenzimidazoles, Shengbo Qing, Wei Huang, Deyue Yan, *Reactive & Functional Polymers* 66 (2006) 219-227.
 15. Poly(benzoxazine-co-urethane)s: A new concept for phenolic/urethane copolymers via one-pot method, Mohamed Baqara, Tarek Agag, Hatsuo Ishida, Syed Qutubuddin, *Polymer* 52 (2011) 307-317.
 16. Electrosynthesis and characterization of an electrochromic material from poly(1,4-bis(3-methylthiophen-2-yl)benzene) and its application in electrochromic device, Bin Wang, Jinsheng Zhao, Chuansheng Cui, Jifeng Liu, Qingpeng He, *Solar Energy Materials & Solar Cells* 98 (2012) 161-167.
 17. Electrochemical synthesis and spectroelectrochemical behavior of poly (diphenylamine-co-4,4'-diaminodiphenyl sulfone), P. Manisankar, D. Ilangeswaran, *Electrochimica Acta* 55 (2010) 6546-6552.
 18. Electrochemical Synthesis, Characterization and Electrochromic Behavior of Poly(4-Aminodiphenylamine-co-4,4'-Diaminodiphenyl Sulfone), D. Ilangeswaran and P. Manisankar, *Electrochimica Acta* In Press, 87 (2013) 895–904.

Unit 5- Review Articles

19. Deep eutectic solvents: syntheses, properties and applications, Qinghua Zhang, Karine D Oliveira Vigier, Sébastien Royer and François Jérôme, Chem. Soc. Rev., 2012, 41, 7108-7146.
20. Deep-eutectic solvents playing multiple roles in the synthesis of polymer and related materials, Daniel Carriazo, Mari'a Concepción Serrano, Mari'a Concepción Gutiérrez, Mari'a Luisa Ferrer and Francisco del Monte, Chem. Soc. Rev., 2012, 41, 4996-5014.
21. Potential applications of deep eutectic solvents in nanotechnology, Ali Abo-Hamad, Maa Hayyan, Mohammed AbdulHakim AlSaadi, Mohd Ali Hashim, Chemical Engineering Journal 273 (2015) 551-567.

Mean overall Score											2.3(High)

Question Paper Pattern

Maximum Marks: 75

Exam duration: Three Hours

Part A – 10 X 2 = 20 Answer All Questions (Two questions from each unit)

Part B – 5 X 5 = 25 Answer All Questions (Either Or type -Two questions from each unit)

Part C – 3 X 10 = 30 Answer Any THREE (One question from each unit)

Semester	Code	Course	Title of the Paper	Hours/Week	Credits	Medium
I	T1MCH4E	CC-4	Crystal Growth and Nonlinear Optics	4	4	English

GUIDE: Dr. K. RAJARAJAN
ASSOCIATE PROFESSOR OF CHEMISTRY

Course Objectives

- ❖ To understand the basic concepts of crystal growth
- ❖ To study the principles and techniques of crystal growth
- ❖ To know the various techniques utilized in crystal growth
- ❖ To study the different types of characterization techniques
- ❖ To impart the basic knowledge on Non linearoptics

Course Outcomes (CO)

On successful completion of the course, scholars will be able to

CO No.	CO-Statements
CO1	Attain in depth knowledge about the nucleation and growth kinetics of crystals
CO2	Get the detailed information about the crystal growth techniques
CO3	Know the thorough knowledge about the gel, melt and vapor techniques of crystal growth
CO4	Understand the versatile knowledge about the characterization techniques of crystal growth
CO5	Get the detailed knowledge about the non linear optics

UNIT I

Basic Concepts Nucleation and Kinetics of Growth

Ambient phase equilibrium – Super saturation – Equilibrium of finite phases -Equation of Thomson Gibbs – Types of nucleation – Formation of critical nucleus – Classical theory of nucleation – Homogeneous and heterogeneous formation of 3D nuclei – Rate of nucleation – Growth from vapor phase solutions and melts – Epitaxial growth – Growth mechanism and classification – Kinetics of growth of epitaxial films – Mechanisms and controls for nanostructures in 0 and 1 dimensions.

UNIT II

Crystallization Principles and Growth Techniques

Classes of crystal system – Crystal symmetry – Solvents and solutions –Solubility diagram – Super solubility – Expression for super saturation – Metastable zone and induction period – Miers TC diagram – Solution growth – Low and high temperatures solution growth – Slow cooling and solvent evaporation methods – Constant temperature bath as a crystallizer.

UNIT III

Gel, Melt and Vapor Growth Techniques

Principle of gel technique – Various types of gel -- Structure and importance of gel – Methods of gel growth and advantages -- Melt technique – Czochralski growth – Floating zone – Bridgeman method – Horizontal gradient freeze – Flux growth – Hydrothermal growth – Vapor-phase growth – Physical

vapor deposition – Chemical vapor deposition – Stoichiometry.

UNIT IV

Characterization Techniques

X-ray diffraction – Powder and single crystal – Fourier transform infrared analysis – Elemental dispersive X-ray analysis – Transmission and scanning electron microscopy – UV-vis-NIR spectrometer – Chemical etching – Vickers micro hardness – Basic principles and operations of AFM and STM --X-ray photoelectron spectroscopy for chemical analysis – Ultraviolet photoemission spectroscopy analysis for work function of the material Photoluminescence – Thermoluminescence.

UNIT V

Basics of Nonlinear Optics

Wave propagation in an anisotropic crystal – Polarization response of materials to light–Harmonic generation – Second harmonic generation – Sum and difference frequency generation– Phase matching – Semiorganics – Thio urea complex – Laser induced surface damage threshold.

Books for Study

1. I.V. Markov, Crystal Growth for Beginners: Fundamentals of Nucleation, Crystal Growth and Epitaxy (2004) 2nd edition.
2. P. Santhanaragavan and P. Ramasamy, Crystal Growth Process and Methods (KRU Publications, Kumbakonam, 2001).
3. H.H. Willard, L.L. Meritt, J.A. Dean, F.A. Sette, Instrumental Methods of Analysis (CBS Publishers, New Delhi, 1986).
4. S. Zhang, L. Li and A. Kumar, Materials Characterization Techniques (CRC Press, Boca Racon, 2009).

Books for Reference

1. J.C. Brice, Crystal Growth Process (John Wiley, New York, 1986).
2. E. N. Kaufmann, Characterization of Materials, Volume-I (John Wiley, New Jersey, 2012).
3. R.W. Boyd, Nonlinear Optics, 2nd Edn. (Academic Press, New York, 2003)
4. D.L. Mills, Nonlinear Optics – Basic Concepts (Springer, Berlin, 1998).

Semester	Code	Course	Title of the Paper	Hours/Week	Credits	Medium
II	T2MCHD	CC-5	Dissertation and Viva Voce	-	8	English

Course Objectives

- ❖ To gain the depth knowledge in laboratory Field
- ❖ To understand the basic principles of research
- ❖ To study the methodology of the research work
- ❖ To apply the various spectra to analyze the compounds
- ❖ To know the knowledge of presenting project work

Course Outcomes (CO)

On successful completion of the course, scholars will be able to

CO No	CO-Statements
CO1	Gain of background knowledge in specific area of chemical sciences
CO2	Learn the steps involved in solving a problem
CO3	Understand the formatting of table work
CO4	Enter in the first step of research aptitude
CO5	Visualize the steps of project work presentation
